APPLE MUSIC

- It has to work on a Europe server (Germany, France; England, Poland) with python3 on Ubuntu 20.04 or Ubuntu Mate 20.04;
- It has to work with Google Chrome;
- It have to listen a tracks in a specific playlist;

Characteristics:
1. When we run the bot, it will open the web site of Apple Music in Google Chrome
2. We'll login with email and password of account (It would be great if the bot saves the login credentials on the apple music website)
3. We'll indicate the playlist to listen to the bot
4. We must be able to insert the seconds of listening between one song and another (from 5 to 200 sec.)
5. The bost must have a refresh in hours so you can choose how many hours it should rest (from 1 to 48 hours). After the restart he has to start working again without having to login again
